CORTENA

CATALOG 2019

ABOUT CORTENA

We develop products to utilize space based on trends set by our customers. We are inspired by natural look with a dose of avant-garde, which will decorate any balcony, terrace, garden, garden house, public place, square, plaza, park, allotment, pergola and marketplace. Corten steel is a universal design loved by architects, business clients and individuals. Our number one priority is to keep our customers happy and satisfied, using high quality materials, advanced production solutions and a lot of professionals who work constantly on improvement of their skills.

Products made by our company, featured in our offer, have always been popular among our most demanding customers, including landscape architects, interior designers, investors, developers, and the public sector. Our focus has always been on functionality, natural look and timeless design, shared by our designers and other employees. Our offer is directed to customers who value top quality, sophisticated design and latest trends.

CORTEN STEEL

Can be distinguished by its increased resistance to weathering, forms a protective coating that reflects rust. That coating guarantees uniqueness, style, elegance and durability. Architects, engineers, sculptors, designers and decorators use Corten steel as a material which color changes constantly during the rusting process, and also thanks to the light effect and weather conditions. The rust layer formed on the surface of this steel becomes more stable over the years, unlike the steel in the cover color, which due to aggressive atmospheric conditions loses its color and gradually decomposes. The natural, reddish color becomes increasingly integrated with its surrounding.

During the initial stage of corrosion, it forms a well-adhering layer of impermeable oxide. This layer consists of iron oxide enriched with alloys such as copper, chromium, nickel, and phosphorus. This compact layer of oxide that forms on the surface, which develops slowly or quickly, according to the environment that surrounds the part made from Corten steel, prevents additional spreading of oxygen in base metals and eliminates internal corrosion.
